An optical fibre blowing machine is a dedicated instrument for cable laying into subterranean tubes. The device uses air pressure or the power of a motor to push the cable through the pipe with ease, thus insuring the cable is installed safely and smoothly without inflicting harm on. Safe, strong, smart: AIRJET blowing machines for fibre optic cables for all network levels "The advice was technically sound and honest. It was clear that it was based on practical knowledge. But what convinced us most of all was the flexible rental solution.) into pre-installed innerduct or direct-buried duct. Extremely compact electrically operated fiber blowing machine optimized for FTTX installation of blown fiber (EPFU). The Ultimaz(TM)-E(TM) Injector is designed for insertion and blowing of microcables indoors and outdoors of buildings or premises. This small, very lightweight, easy to transport. For micro and mini cables O 1.

MicroFlow TOUCH Fully automatic fiber blowing machine that secures fast and reliable optical fiber blowing. Designed for air blown fiber and small fiber optic

Learn the fiber optic cable blowing procedure with our detailed guide, covering essential steps, equipment, and best practices for efficient installation.

Installing air-blown fiber optic cable via a jetting machine doesn't need to be a complicated process. In this how-to video, we show you the tools and techniques you'll need to properly blow and ...

The safe and efficient laying of fiber optic cables in HDPE pipes is the foundation of modern communication infrastructures. SkyJET Fiber Optic Cable Blowing Machine enables fast and efficient

Fiber optic cable blowing machines have become an essential tool for telecommunication contractors and companies looking to install fiber optic cables

Cable Protection The clean air pressure inside the tubes, prevents cables from bending or breaking, maintaining their longevity and performance.

MICROFLOW TOUCH Fully automatic fiber blowing machine that secures fast and reliable optical fiber blowing. Designed for air blown fiber and small fiber optic cables. Pricing does not include any extra

Safe, strong, smart: AIRJET blowing machines for fibre optic cables for all network levels

Cable Blowing Machines MiniSKY Fiber Blowing Machine Fiber Blowing Machines Working with a single or double air motors. Fiber optic cable range: 2.5mm-16mm.

Air blowing machine for optical cables

You can easily blow fiber cables into the HDPE pipes. For each cable blowing machine, if your cables are thin there is a machine with low torque for the thicker cable diameters, the higher your machine

Robust and powerful, pneumatic operated fiber blowing machine designed for single cables and for relining of multiple micro ducts. Configuration can be made for cable between 4 and 40 mm and duct

Air blown fiber systems use air to blow micro optical fiber cables through pre-installed microducts. Air blowing fiber, also known as jetting fiber, is an efficient way to install fiber optic cable and facilitates

The Miniflow is used for blowing in fibre optic cables from 4 up to 11 mm into ducts from 7 up to 20 mm. The Miniflow has a robust and compact design and is very simple to operate.

3.Air Blowing Machine: This equipment generates high-pressure compressed air that propels the micro-optical fiber cables through the microducts. Air blowing

Robust and powerful, pneumatic operated fiber blowing machine designed for single cables and for relining of multiple micro ducts.

Jetluber is a device that lubricates the optical fiber cable during fiber blowing. The unit is air-powered and works with a pre-equipped V2 or V3 Jetting machine.
