The main components of the box are ABS engineering plastic, polycarbonate transparent PC material, DMC, SMC four kinds of materials injection molding and pressing. A Distribution Box, commonly known as a DB Box, serves as the central point for safely distributing electrical power from a main supply to multiple downstream circuits. In practical. The material used for manufacturing low-voltage cable branch box box is a kind of resin matrix composite material. It ensures that circuits are safe, organized, and easy to manage. SMART DISTRIBUTION BOXES FOR FLEXIBLE BUILDINGS. They take up less space than loose wires, look neater and more organized, and keep cable replacement simple in areas where cables are easily. Residual current protection (RSD/RCCB/RCBO): Detects leakage current and cuts off power to reduce electric shock risk.
