

Article Overview

Leading manufacturers for custom cold aisle containment solutions include Cool Shield, AZE Systems, Maysteel Industries, and Faztek, offering modular, scalable, and turnkey designs for data centers.

Key Manufacturers and Offerings

Cool Shield provides state-of-the-art hot and cold aisle containment systems designed to optimize airflow and energy efficiency in both new and existing data centers. Their solutions are modular and customizable, featuring aluminum channels with threaded and slotted sides for flexible configurations. Cool Shield systems ensure consistent supply temperatures to server intakes while directing hot exhaust air efficiently, reducing energy costs and improving cooling performance. AZE Systems offers partial and total containment solutions, including hot aisle containment (HAC), cold aisle containment (CAC), and rack-based heat containment. Their systems use ceiling panels, walls, and end-of-row doors to create predictable airflow, prevent hot and cold air mixing, and enhance cooling efficiency. AZE emphasizes modularity and compatibility with various server rack types. Maysteel Industries specializes in custom-engineered hot and cold aisle containment solutions. Their design-build approach allows for turnkey solutions or fully customized builds, coordinating engineering, manufacturing, and delivery. Maysteel's systems use vertical panels to isolate hot or cold aisles, improving CRAC unit efficiency and reducing energy costs. They also provide access to raw materials and global sourcing partnerships to streamline project timelines. Faztek Industrial Solutions provides scalable, custom-built aisle containment systems using T-slot aluminum extrusion frames and panel profiles. Their solutions are highly flexible, allowing for growth and adaptation to unique data center layouts. Faztek offers a variety of panel types, including twin-wall polycarbonate for insulation, and features like self-closing doors and panel gaskets to enhance airflow control and security.

Considerations for Choosing a Manufacturer

- o Customization and Scalability: Ensure the manufacturer can tailor the system to your room layout and future expansion needs.
- o Turnkey Solutions: Some providers, like Maysteel, offer full design-build services, reducing coordination challenges.
- o Material and Panel Options: Consider insulation, durability, and airflow efficiency when selecting panels.
- o Energy Efficiency: Proper containment reduces cooling costs and maintains consistent server intake temperatures.
- o Compliance and Safety: Verify adherence to NFPA standards and fire suppression compatibility. These manufacturers provide comprehensive solutions for data centers seeking custom cold aisle containment, balancing energy efficiency, airflow management, and operational reliability.
