Semiconductor laser diodes range widely in price based on a few key parameters. The wavelength, power, spectral qualities, package type, cavity type and quantity will all have an effect on the price. Y.

Within the BAL series, wavelengths between 653 and 1,120 nm are available with output powers between 1 and 19 W in cw mode or even up to 90 W in pulse

This commercial class of laser is manufactured in high volume and offers a relatively low cost per watt (relative to other 10 watt laser technologies). For example, a fiber-coupled 10W laser
