

How to hold a fiber optic cable so it doesn't fall

Preview

At its core, a fiber optic tension clamp, often referred to as a dead-end clamp or anchor clamp, is a piece of hardware designed to terminate and hold an aerial fiber optic cable under a specific mechanical tension. Of course, you know that fiber optic cables have glass in them, but it's easy to be misled by the jacket surrounding the glass core; it would appear to be protected enough. You will need to handle this product with care. Here are some of the best practices for handling fiber optic. Fiber cable is designed to be pulled with much greater force than copper wire if pulled correctly, but excess stress on the cable may harm the fibers, potentially causing eventual failure.
