

Mobile fiber broadband is best paired with a router

Preview

Choose one which includes a router, so you can use both wired and wireless networking and make use of more advanced networking features. It works by connecting to a phone network (such as 4G, 5G, or older 3G networks) rather than a fixed broadband line (like fibre optic. Both MiFis and mobile broadband routers require a SIM card or eSIM to work. Just like your smartphone, the SIM allows them to connect to the Internet through a mobile internet connection on a specific network. The main difference is how they're built and where you can use them. Unlike traditional routers that rely on fixed-line connections like DSL or fibre, SIM card routers harness cellular networks such. Fiber internet plans from T-Mobile offer upload and download speeds of up to 2GBs, and having a router capable of delivering those speeds is key. David Satin has been a dedicated News Writer at The Streamable since 2022, covering a wide range of stories in the entertainment and streaming. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Dong's note: I first published this regularly updated piece on May 12, 2026, and last updated it on May 25, 2026, with the latest picks. Best 5G solutions: The UniFi 5G Max PoE.
