

Price list of galvanized cable trays in North Africa

Article Overview

Galvanized cable trays in North Africa typically range from \$2 to \$25 per meter, depending on type, material, and finish.

Price Range and Types

The cost of hot-dip galvanized (HDG) or pre-galvanized steel cable trays varies widely based on material, tray type, and size. Standard ladder-type trays are generally more expensive due to their load-bearing capacity, while wire mesh or perforated trays are lighter and more affordable. Prices per meter typically range from \$2 to \$25, with bulk orders or project-based purchases often reducing the unit cost . Standard lengths are usually 2.4 to 2.5 meters .

Material and Finish Impact

- o Hot-dip galvanized (HDG): Offers superior corrosion resistance, suitable for outdoor or industrial environments, and commands a higher price .
- o Pre-galvanized steel: Less durable in corrosive conditions but more budget-friendly .
- o Stainless steel (304/316): Used in highly corrosive environments, significantly more expensive .
- o Powder-coated trays: Provide additional surface protection and aesthetic options, slightly increasing cost .

Regional Considerations

In North Africa, prices may be influenced by import costs, local manufacturing, and shipping. Suppliers like Hutaib Electrical and other African manufacturers provide a range of cable trays and accessories, including bends, elbows, tees, and reducers, with finishes compliant with international standards . Local fabrication and bulk procurement can reduce overall costs.

Summary

For budgeting purposes in North Africa:

- o Wire mesh or perforated trays: \$2-\$10 per meter
- o Ladder-type galvanized trays: \$10-\$25 per meter
- o Stainless steel trays: Higher than \$25 per meter depending on grade and thickness Prices vary with tray width, load capacity, and finish, so contacting local suppliers for quotes is recommended to obtain precise figures for specific projects .
