Article Overview

Electricity meter boxes for primary distribution typically cost between \$600 and \$2,000 for residential units, with industrial or custom enclosures ranging from \$5,000 to \$12,000+, depending on specifications and installation requirements.

Residential Meter Boxes

For standard residential installations, electric meter boxes generally range from \$600 to \$2,000, with most homeowners paying \$1,000 to \$1,400 depending on amperage, outdoor weatherproofing, and site conditions . Higher-capacity units, such as 200A-rated or outdoor-weatherproof boxes, are positioned at the upper end of this range . Additional costs may include permits, inspections, and professional installation, which ensures compliance with electrical codes and proper grounding .

Commercial and Industrial Meter Boxes

For industrial or custom enclosures, prices can rise significantly, typically \$5,000 to \$12,000+, depending on the amperage, material construction, number of circuits, and complexity of installation . These units often include advanced features such as multiple meter sockets, circuit breaker protection, and compatibility with three-phase systems . Installation complexity, including overhead versus underground service and site-specific requirements, can further influence the total cost .

Factors Affecting Price

- o Amperage rating: Higher amp meters cost more.
- o Construction materials: Weatherproof or heavy-duty materials increase price.
- o Meter type: Single-phase vs. three-phase, or multiple meter sockets.
- o Installation complexity: Labor, permits, and rewiring requirements.
- o Location: Urban areas with higher labor costs may increase total expenses.
- o Additional features: Smart monitoring, remote control, or integration with building management systems can add to the cost .
