

Article Overview

Fiber optic cable typically costs between \$0.25 and \$6 per foot, depending on type, strand count, and installation requirements.

Price Ranges

- o Retail per foot: \$1 to \$6 for standard fiber optic cables, with simple 1-core FTTH drop cables around \$0.13 per foot and high-count backbone cables (e.g., 288 strands) reaching \$6 per foot or more .
- o Wholesale bulk purchases: \$0.09 to \$1.52 per foot, depending on fiber type and quantity .
- o Single-mode fiber: \$0.10 to \$0.50 per foot for the cable itself; supports long-distance transmission and is generally less expensive per foot than multimode fiber .
- o Multimode fiber: \$0.30 to \$1.00 per foot; suitable for shorter distances and higher bandwidth applications .
- o Armored or outdoor-rated cables: \$0.50 to \$5 per foot, designed for harsh environments or direct burial .

Installation and Project Costs

- o Residential or small-business runs: Cable alone \$0.25-\$1.50 per foot; installation adds \$2.00-\$6.00 per foot depending on complexity .
- o Medium projects: 2,000 ft outdoor run with conduit and multiple terminations: total cost ? \$4,940-\$6,120 .
- o Large or premium projects: 5,000 ft outdoor armored cable with multiple splices and professional testing: total cost ? \$11,000-\$14,500 .

Factors Affecting Price

- o Fiber Type and Strand Count: Higher strand counts increase cost proportionally; single-mode vs. multimode affects both price and performance .
- o Cable Construction: Indoor riser-rated cables are cheaper than plenum-rated; armored cables cost more .
- o Jacket Material: LSZH (Low Smoke Zero Halogen) cables are 25-40% more expensive than standard PVC .
- o Installation Complexity: Underground or trenching work, splicing, and testing significantly increase total project costs .
- o Pre-terminated vs. Field Termination: Pre-terminated cables cost more upfront but reduce labor costs on-site by up to 70% .

Summary

For budgeting purposes, expect fiber optic cable material costs to range from \$0.25 to \$6 per foot, with total installed project costs varying widely based on distance, environment, and labor requirements. Single-mode fiber is generally preferred for long-distance or high-speed applications, while multimode fiber is suitable for shorter runs. Armored or outdoor-rated cables and pre-terminated assemblies increase upfront costs but can
