Connect switch console port to the computer serial port with a combination of an RJ45 to RS232 converter cable (provided by the vendor) and an RS232 to USB converter cable (prepared by yourself). Install terminal emulation software on the PC. In order to remotely access the CLI of your switch, you must use an SSH or Telnet client. Note: For instructions on how to configure the Transmission Control Protocol (TCP) and User Datagram. To configure SSH on a Cisco switch and enable secure remote management, you typically need to set up a local user account, configure an IP domain name, generate RSA cryptographic keys, specify the SSH protocol version, and apply these settings to the Virtual Teletype (VTY) lines.
