

What does it mean to connect broadband to a network cabinet

Preview

Fibre to the cabinet broadband (or FTTC for short) is an internet connection that runs along fibre optic cables from the telephone exchange to the (usually green) roadside cabinet. With the installation of FTTC, fibre optic cable is led out to a cabinet that will most likely have had its outside. Not only a simple storage unit, a network cabinet is a key player in safeguarding and organizing critical network equipment. Whether you're setting up a new office or streamlining an existing network, understanding the importance, types, and usage of network cabinets is crucial. It is often referred to as 'super-fast broadband' or 'next-generation broadband' as it. Understand broadband street cabinets, how they work, and why they matter for your connection speed. Learn about FTTC vs FTTP and what Openreach is doing with its network.

Everything you need to know about how to set up broadband at home on your own - and which broadband packages
