Setting up a fiber optic network requires specific equipment to ensure optimal performance. An Optical Network Terminal (ONT) is a crucial device that connects the fiber optic cable to a home or business. ONTs typically feature multiple ports for Ethernet connections and may also include Wi-Fi. But building, maintaining, and troubleshooting these networks requires a carefully assembled toolkit of specialized instruments and devices, each designed to handle a specific stage of the installation or maintenance process. Understanding what each piece of equipment does and when to use it is. Discover the essential equipment needed for fiber optic internet installation and maintenance.

This article will delve into the essential equipment needed for fiber optic internet, providing a comprehensive guide for

Never directly pull on the fiber itself. Fiber optic cables have Kevlar aramid yarn or a fiberglass rod as their strength member. You
