The core switch aggregates traffic from multiple mid-level network devices, requiring immense processing power to prevent bottlenecks. A core switch is a high-capacity, high-performance Layer 3 switch positioned at the physical backbone of an enterprise network. Engineered to aggregate massive volumes of data from distribution switches, it provides ultra-low latency and maximum throughput to ensure uninterrupted routing and packet. A core switch in networking serves as the high-capacity backbone, italic centralizing data flow and ensuring efficient communication between different network segments. Simply put, it's the kingpin that keeps your network humming.

A core switch is not merely a type of switch but rather denotes the switch that operates at the core layer (the network's backbone). Positioned at the
