

Where is the AI server deployment tool

Preview

Microsoft Foundry is a platform for deploying and managing custom AI models in Azure. This guide covers 10 AI deployment platforms for 2026, explaining what to look for in serving capabilities, governance, and integration, along with how to match the right tool to your team's needs. Here are the main points to keep in mind: Before diving into the details, here's a quick comparison. In about 30-60 minutes you can activate your enterprise account, install NVIDIA AI Enterprise software, and confirm GPU containers run. Follow the steps for your path: bare metal (Ubuntu + Docker), VMware vSphere, or public cloud (Azure walkthrough below). What You Will Accomplish When you finish. The Azure AI developer tools are a collection of AI-powered tools that help you manage, deploy, and troubleshoot Azure resources by using natural language. The toolset includes GitHub Copilot for Azure, the Azure MCP Server, and Azure Skills. The new Cloud API Registry allows you to easily find and use standardized Model Context Protocol (MCP) servers for services like BigQuery.
