

Why can't I turn off the network cabinet lights

Preview

Disabling Wake on LAN both in BIOS and Windows network driver sometimes helps to turn off these lights. There are stickers called 'Dots' which are designed specifically for covering LEDs, but you may also use semi-transparent silicon tape to reduce the lights. Going to. Understanding the lights on your network or Ethernet ports is essential for maintaining a stable and reliable network. For enterprise IT teams and engineers using Router-switch devices, these LEDs are often the first indicator of network health. Otherwise just put tape/tippex/marker whatever over it, to block it out. the only real solution. Fortunately, those stubborn LEDs are not a hardware fault--just a side effect of Wake-On-LAN, and you can turn them off permanently with a few clicks. What If You Still Need Wake-On-LAN? Is disabling WOL harmful to the NIC? Why did Fast Startup have no effect? When you select Shut down in Windows. If there is no option to turn off WoL in BIOS, then the LAN controller is probably hard-wired to 5VSB and the only way to force the controller off once it has been enabled by drivers is to hard-off the PSU until 5VSB dies so the controller goes into uninitialized state when the PSU is turned back. Seeing no light on the ethernet port seems self-explanatory - there's no connection.

Multiple factors are at play when under cabinet lightings stop working. It can be the light's powering method or the types of bulbs used for the
